samz.my.id | Jakarta, Indonesia

Full-stack Software Engineer delivering retail ERP, POS, and loyalty platforms across 20+ applications for 5 enterprise clients, with Laravel, Angular, Ionic Angular, React, and .NET. Specializes in cross-system integration, multi-tenant architecture, and database performance tuning — cutting redundant API calls by 40% and developer debugging time by 70%.

PROFESSIONAL EXPERIENCE

IGCY Singapore – Full Time Oct 2025 – Present

Junior Software Engineer

- Feature Engineering & Cross-System Integration:** Tasked with launching a referral programme that had to stay consistent across a fragmented retail stack, designed and integrated an affiliate promotion system across 3 core platforms (Loyalty App, POS/Cashier, and Admin Panel), enabling real-time voucher redemptions, driving a 25% boost in organic user acquisition, and providing 100% data transparency for referral tracking.
- Architecture Refactoring & Developer Experience Optimization:** Inherited a legacy Android-bound Ionic Angular codebase that slowed every debugging cycle; refactored it into a Progressive Web App (PWA) using an environment-based database strategy (SQLite WASM & SQLite Cordova), accelerating developer debugging time by 70% while preserving existing business logic and core system functionality seamlessly.
- Client & Database Performance Tuning:** Assigned to cut server load on data-heavy ERP and POS screens, optimized system performance by implementing infinite scrolling, search debouncing, and relational database table normalization, cutting redundant API calls by 40% and significantly reducing server workload.
- Multi-Tenant Architecture & Data Isolation:** With a single shared codebase serving 5 enterprise retail clients across 20+ applications, designed a reusable entity-scoping layer with role-based access control and rolled it out across 4 module families (promotion, customer, merchandising, and loyalty), enforcing per-tenant data isolation centrally and eliminating repetitive manual checks from every query.
- Platform Scalability & Module Ownership:** Responsible for keeping reporting responsive as transaction volume grew, implemented monthly table sharding across high-volume sales-detail and receipt tables with targeted indexes, cached count queries, and batched synchronisation jobs, while owning end-to-end delivery — schema, API, and UI — of 6 core modules including Planogram, Sales Order, and Stock Take.

PT Tera Multi Wahana – Remote Aug 2024 – Jun 2025

IT Developer Intern

- Developed a REST API in C# and the .NET Framework that exposed database operations as endpoints for front-end consumption.
- Built a Dart and Flutter web application for data processing and reporting, plus a XAML desktop application for data management.

PT Infosys Solusi Terpadu – Remote Jun 2024 – Aug 2024

Backend Developer Intern

- Engineered Java middleware on the Software AG platform and implemented a data validation layer that hardened the security and integrity of a financial program.

PERSONAL PROJECTS

SiniAja! – Link-in-Bio Platform for Creators & Small Businesses siniajafrontend.vercel.app

Laravel 13 · PHP 8.3 · React 18 · TypeScript · Vite · Tailwind CSS · MySQL · Pest · Vercel

- Architected and built a full-stack platform as an API-only Laravel backend (83 REST endpoints, 27 tables) paired with a React and TypeScript SPA, featuring a config-driven block registry that renders every content block type from polymorphic models, so new block types ship without schema changes.
- Hardened authentication with Laravel Sanctum tokens, Google Sign-In, and a hand-implemented RFC 6238 TOTP multi-factor flow with trusted-device tracking and per-route rate limiting, validated by ~337 automated Pest tests including a dedicated security-hardening suite.
- Cut repeated database work on public profile loads with a settle-period payload cache invalidated by global write middleware, and shipped a bilingual (EN/ID) interface with drag-and-drop link reordering.

TECHNICAL SKILLS

Languages: PHP, TypeScript, JavaScript, C#, Java, Dart, Go (Golang), C, SQL, HTML, CSS

Frameworks & Libraries: Laravel, Angular, Ionic (Ionic Angular), React, .NET Framework, Flutter, Livewire, Vite, Tailwind CSS, Gin, GORM, AlpineJS

Databases & APIs: MySQL, SQLite, Relational Databases, Query Optimization, Table Sharding, Caching, REST API, JSON Web Token (JWT)

Tools & Practices: Git, Progressive Web Apps (PWA), Sentry, Pest, Automated Testing, Queues & Background Jobs, Debugging, Agile

Soft Skills: Problem Solving, Detail and Accuracy, Communication and Presentation, Collaboration and Teamwork

EDUCATION

Institut Teknologi Del – Toba Sep 2021 – Sep 2025

Bachelor's Degree in Information Systems, GPA 3.65/4.00

Infinite Learning – Remote Feb 2024 – Jun 2024

Certified Independent Study in Web Development & UI/UX Design – MSIB

CERTIFICATIONS & LEADERSHIP

HackerRank: Software Engineer · Problem Solving (Basic) · Java (Basic) · CSS (Basic)

Leadership: Chairman, Association Consultative Assembly · Vice Chairman, Del Programming Club (Sep 2023 – Apr 2024)
